A keyway has a N9 and the internal keyway has a j59. Could anyone offer a simpler explanation of what I am seeing One of the external shafts has a f9 while most of the other shafts have a h9 or h6.. The application calculates tolerances for nominal diameters between 0 and 19 685 inches in imperial mode.. Users can now find tolerances for Linear dimensions, Chamfers and Radii, Angles, Straightness, Flatness, Perpendicularity, Symmetry, and run out as defined in ISO 2768 table 1 and table 2.

I do not have a full copy of the DIN but I do have some notes and a brief discription of how the tolerances are supposed to work but I still dont quite understand it.. One of the external shafts has a f9 while most of the other shafts have a h9 or h6.. Based on ISO 286,the application allows users to enter a nominal diameter for hole or shaft, select the tolerance grade using a simple selector, and reveal the upper and lower tolerances based on the selected grade.
